July 2013

WORK EXPERIENCE

Lead Software Engineer

(IoT on the Blockchain)

Comcast

Philadelphia, PA

January 2018 – Present

- Designed and built distributed Hyperledger Fabric blockchain network over Docker Swarm, including Java and Node chaincode, and RESTful APIs using the Fabric Java SDK on the Spring framework
- Work with team of 5 to design and build backend and various frontend clients supporting fully custom blockchain ledger for IoT applications (Java, Spring, Scala, React/Redux, AWS)
- Regularly verify system supports required load (~1k rps)

Software Engineer II

(Financial Risk Management)

NextGear Capital

Indianapolis, IN

June 2017 – January 2018

- Worked with team of 12 to build ACH payment software processing well over \$1 million per night
- Java 8, Spring, JavaScript, React/Redux: backend and frontend development
- Monolith to microservices transition: shared responsibility for both high level system architecture and lower level implementation
- Internal and external apps: work closely with internal users, Product, and UX to deliver the most valuable features

Software Engineer II

(eCommerce/Monetization)

Angie's List

Indianapolis, IN

May 2016 – June 2017

- Worked with a team of 10 to build project management software for service providers on both web and mobile platforms from the ground up
- Cross-functional development: backend, frontend, and mobile
- Scala, Java 8, Android, JavaScript, React/Redux

Software Engineer

(Business Intelligence)

Appriss

Louisville, KY

May 2015 – May 2016

- Spearheaded effort to incorporate machine learning into internal and external analytics
- Developed and maintained software relating to business intelligence
- Built and supported customized analytics solutions (Java, OracleDB, bash scripting, JasperReports Server)

TECHNICAL SKILLS

Java, JavaScript, Scala, React/Redux, Android, AWS, SQL, NoSQL, Git, Scrum, Linux, Bash
